

Ketch App Valuation Report

Trademark Online Valuation

INTRODUCTION.

KETCH is an web application used for estimating the dollar value of a trademark (the literal part) on the internet. KETCH performs the estimation by first converting the trademark into an online keyword, obtaining numerative data on the trademark, and determining an "L" value for the trademark. "L" values are proprietary to KETCH, and are used to narrow trademarks to a specific industry.

This valuation report presents the results of the estimation and provides analysis. This report is broken down into the sections Synopsis; Industry Overview; Valuation Variables; Valuation; Analysis. A Glossary is included.
